Design Document Rubric

Trait	Outstanding	Good	Marginal	Poor
Guidance in reading the code	Contains detailed explanation of the responsibility of each module of the code	Modules are listed but not described in any detail.	Not all modules are listed and described. Descriptions are present but not accurate.	Modules are not distinguished. What is present is not accurate.
Write an equivalent program	In addition to the above contains a detailed description of possible inputs along with the required output. Along with description of what will be done in case of error.	All possible inputs are listed along with outputs but no description of error handling is present.	Not all possible inputs are listed. No error handling is mentioned.	Not all inputs are listed and what is there has errors.

Guidelines:

A design document is a document from which another person can write an equivalent program.

It should give guidance in reading the code.

The design document should discuss the organization of the program.

The design document should contain explanations of the inputs and outputs of the program.

The design document should contain descriptions of error handling.
